Quarantine.

The State Board of Health is preparing to combat influenza in case it should appear, and has issued regulations under the law passed by the last Legislature, which are to be enforced by local Boards of Health.

In case of contagious or communicable disease a very rigid quarantine is provided for, but for influenza this is modified to require strict isolation of the patient and attendant in a separate room or part of the house and the placing of a placard at the entrance of the house plainly indicating that the disease exists. This placard is not to be removed until the health officer is satisfied that no further cases exist upon the premises.

The above conditions being followed, the well occupants may go about their regular business.

The new law also provides that any person who refuses or neglects to obey the rules, regulations, etc., or leaves any pest-house or quarantined house without consent of the health officer, or evades or breaks quarantine, or knowingly conceals a case of contagious, infectious or communicable disease, or removes, destroys, obstructs from view or tears down any quarantine card, cloth or notice posted by attending physician or the health officer (or by direction of either of them) shall be punished by imprisonment in the county jail not exceeding one year, or by a fine not exceeding \$1,000.00, or by both such fine and imprisonment.

It is hoped that we may escape a recurrence of the scourge, but if any case should appear let prompt action be taken to prevent its spread.

Dr. K. W. Gay is the County Health Officer, and all cases should be reported to him without delay, whether he is attending physician or not.

A lot of the old-timers are visiting Annapolis these days. August Johnson of California was here a couple of days the past week. DELCO-LIGHT was designed and built by men who were raised in farm homes—who experienced the discomforts and inconveniences of farm life—and who set out deliberately years ago to develop an electric plant that would provide city advantages for rural communities.

They were the same men whose engineering talent had made DELCO Starting, Lighting and Ignition Equipment for automobiles the standard of the world—

They knew electricity—and they knew the needs and limitations of farm life—

They knew that an electric plant to give service in a farm home must be simple, so that it would not get out of order and require complicated repairs—

It must be easily operated and require little attention—

It must be very economical in operation—

It must be built to stand hard usage and it must last indefinitely—
